

## SYNOPSIS

This project is entitled "Gym Management System," which is a computerized management solution designed to streamline and automate the operations of a gym. The system is developed to manage various aspects of gym activities including member registration, workout sessions, billing, attendance tracking, and equipment management. It will help gym owners and managers efficiently manage member data, workout plans, schedules, payments, and more, in a user-friendly environment.

The Gym Management System provides features for the registration of new members, recording their personal and fitness details, and assigning appropriate workout programs based on their goals and fitness levels. The system also tracks attendance and provides real-time updates on the usage of gym equipment, ensuring optimal resource management. Billing and payment functionalities are automated, allowing for easy tracking of membership fees, subscriptions, and any additional services like personal training sessions or classes.

With this system, gym owners will be able to manage staff records, including trainers and administrative personnel, as well as track their performance and responsibilities. Reports related to membership growth, financial status, and staff performance will be generated automatically, offering valuable insights to support decision-making processes.

The proposed system will significantly improve the workflow of daily gym operations, reduce manual errors, and save time. By leveraging modern technology, the Gym Management System ensures that all data is securely stored and easily accessible, facilitating a seamless user experience for both gym staff and members.

The system is developed using **PHP** and **MySQL**. PHP, being a versatile and widely-used server-side scripting language, ensures efficient processing, while MySQL, an open-source relational database management system, guarantees fast and secure data storage and retrieval. The combination of these technologies offers a robust and scalable solution for managing gym operations.

# 1. INTRODUCTION

## 1.1 About the Project

The Gym Management System is designed to streamline and automate various administrative and operational tasks within a fitness center. This system facilitates member registration, attendance tracking, subscription management, trainer scheduling, and financial transactions. By implementing this system, gym owners and staff can efficiently manage their daily activities while improving member engagement and satisfaction.

With the increasing popularity of fitness and health consciousness, gyms require an effective management system to handle a growing number of members and services. This project aims to reduce manual work, minimize errors, and provide real-time insights into gym operations. The system ensures seamless communication between members, trainers, and management, ultimately enhancing the overall experience and efficiency of the gym.

Key features of the Gym Management System include:

- **Member Registration & Profile Management** – Enables easy enrollment and tracking of gym members.
- **Subscription & Payment Management** – Handles membership fees, due payments, and renewal notifications.
- **Attendance Tracking** – Monitors member and staff check-ins using RFID, biometric, or manual entry.
- **Trainer & Schedule Management** – Allows assigning trainers to members and managing workout schedules.
- **Workout & Diet Plans** – Provides personalized fitness plans based on member goals.
- **Reports & Analytics** – Generates reports on gym performance, revenue, and member activity.

The implementation of this system not only improves operational efficiency but also enhances the overall customer experience, making gym management more effective and hassle-free.

## 1.2 About the Language

The Gym Management System is developed using **PHP** as the backend language and **MySQL** as the database management system to ensure reliability, security, and scalability.

- **Frontend:** The user interface is built using **HTML, CSS, and JavaScript**, with additional support from **Bootstrap** for responsiveness.
- **Backend:** The core functionalities of the system are implemented using **PHP**, leveraging frameworks like **Laravel** or **Core PHP** for efficient server-side logic.
- **Database:** The system uses **MySQL** to store and manage member details, transactions, and schedules efficiently.
- **Authentication & Security:** Secure login and user authentication are implemented using **PHP sessions and password hashing techniques (bcrypt)** to ensure data privacy and protection against unauthorized access.
- **Hosting & Deployment:** The system can be deployed on **Apache Server (XAMPP, LAMP, or WAMP)** or hosted on cloud services like **AWS, DigitalOcean, or cPanel-based shared hosting**.

By leveraging PHP and MySQL, the Gym Management System ensures high performance, data security, and user-friendly access for both members and administrators. The combination of these technologies allows for efficient database management and a seamless user experience.

## **2. SYSTEM STUDY AND ANALYSIS**

### **2.1 Existing System**

The current method of managing gym operations is largely manual, relying on paper records or basic spreadsheets to track memberships, attendance, and payments. This approach is time-consuming, prone to errors, and inefficient in handling a large volume of members.

### **2.2 Drawbacks of the Existing System**

- Manual record-keeping leads to data loss and inconsistencies.
- Difficulty in tracking member subscriptions and payment status.
- Inefficient trainer scheduling and workout planning.
- Lack of automated attendance tracking.
- No centralized database for member and gym data.

### **2.3 System Analysis**

A detailed analysis of the existing system highlights inefficiencies in managing memberships, tracking payments, and scheduling training sessions. The new system aims to automate these processes, reducing errors and improving operational efficiency.

### **2.4 Proposed System**

- Automation reduces human errors and enhances efficiency.
- Secure and structured database management using MySQL.
- Improved member experience with personalized workout and diet plans.
- Real-time attendance and payment tracking.
- Simplified trainer and session management.

The proposed Gym Management System replaces manual operations with an automated solution that streamlines all aspects of gym management. It provides a centralized database, real-time updates, and a user-friendly interface for members and staff.

## **2.4.1 Advantages of the Proposed System**

### **2.5 Feasibility Study**

A feasibility study evaluates the practicality of implementing the proposed system.

#### **2.5.1 Technical Feasibility**

The system is developed using PHP and MySQL, ensuring easy deployment on widely available platforms like Apache.

#### **2.5.2 Economic Feasibility**

The cost of implementing the system is lower than maintaining a manual system, leading to cost savings in the long run.

#### **2.5.3 Behavioral Feasibility**

The system is designed to be user-friendly, reducing resistance to adoption by gym staff and members.

## **2.6 Hardware and Software Requirements**

### **Hardware Requirements**

- Server with at least 4GB RAM and 500GB storage.
- Workstations for staff with basic computing capabilities.

### **Software Requirements**

- Operating System: Windows/Linux/macOS.
- Web Server: Apache with PHP support.
- Database: MySQL.
- Browser: Chrome, Firefox, or Edge for system access.

The proposed system ensures a more efficient and reliable way of managing gym operations, ultimately enhancing user experience and operational effectiveness.

## 3. SYSTEM DESIGN AND DEVELOPMENT PROCESS

### 3.1 Introduction

System design involves the planning and structuring of the Gym Management System to ensure efficiency, reliability, and ease of use. This phase focuses on defining system architecture, data flow, and interface design to meet user requirements.

### 3.2 Input Design

The input design focuses on capturing user data efficiently while ensuring data accuracy and security. Key input forms include:

- **Member Registration Form** – Captures personal details, membership type, and payment details.
- **Trainer Scheduling Form** – Allows assigning trainers to specific members and sessions.
- **Attendance Tracking** – Enables members to check in via biometric, RFID, or manual entry.
- **Payment and Subscription Forms** – Tracks membership payments, due amounts, and renewal dates.

### 3.3 Output Design

The output design ensures that processed data is presented in an intuitive and meaningful way. Key outputs include:

- **Membership Reports** – Displays active, expired, and pending memberships.
- **Trainer Schedules** – Provides a detailed schedule of trainers and assigned sessions.
- **Attendance Reports** – Tracks daily, weekly, and monthly attendance.
- **Payment Reports** – Shows financial transactions and outstanding dues.

### 3.4 Database Design

The database design ensures efficient storage and retrieval of gym-related data. The system uses **MySQL** as the database management system, with the following key tables:

- **Users Table** – Stores member and admin login credentials.

- **Members Table** – Stores member personal details and subscription history.
- **Trainers Table** – Contains trainer details, assigned members, and schedules.
- **Attendance Table** – Tracks member and staff check-in/check-out times.
- **Payments Table** – Manages membership fees, payment status, and due dates.

A well-structured database ensures data integrity, reduces redundancy, and improves system performance. The Gym Management System is designed to provide seamless data access and management for an enhanced user experience.

### 3.5. Table Design

Table: user

Primary Key: userid

| Field        | Data Type | Constraints | Description   |
|--------------|-----------|-------------|---------------|
| userid       | Varchar   | Primary key | User ID       |
| username     | Varchar   |             | User Name     |
| gender       | Varchar   |             | Gender        |
| mobile       | Varchar   |             | Mobile        |
| email        | Varchar   |             | Email         |
| dob          | Varchar   |             | Date Of Birth |
| joining_date | Varchar   |             | Joining Date  |

Table: admin

Primary Key: id

| Field     | Data Type | Constraints | Description |
|-----------|-----------|-------------|-------------|
| id        | int       | Primary key | ID          |
| username  | Varchar   |             | User Name   |
| pass_key  | Varchar   |             | Password    |
| securekey | Varchar   |             | Secure Key  |
| Full_name | Varchar   |             | Full Name   |

Table: address

Primary Key: id

| Field      | Data Type | Constraints | Description |
|------------|-----------|-------------|-------------|
| id         | Varchar   | Primary key | ID          |
| streetName | Varchar   |             | Street Name |
| state      | Varchar   |             | State       |
| city       | Varchar   |             | City        |
| zipcode    | Varchar   |             | Zipcode     |

Table: enrolls\_to

Primary Key: uid

| Field     | Data Type | Constraints | Description |
|-----------|-----------|-------------|-------------|
| uid       | Varchar   |             | User ID     |
| et_id     | Int       | Primary key | Enroll ID   |
| pid       | Varchar   |             | Paid ID     |
| paid_date | Varchar   |             | Paid Date   |
| expire    | Varchar   |             | Expire Date |
| renewal   | Varchar   |             | Renewal     |

Table: health\_status

Primary Key: hid

| Field   | Data Type | Constraints | Description |
|---------|-----------|-------------|-------------|
| hid     | int       | Primary key | Health ID   |
| calorie | Varchar   |             | Calorie     |
| height  | Varchar   |             | Height      |
| weight  | Varchar   |             | Weight      |
| fat     | Varchar   |             | Fat         |
| remarks | Varchar   |             | Remark      |
| uid     | Varchar   |             | User ID     |

Table: plan

Primary Key: pid

| Field       | Data Type | Constraints | Description |
|-------------|-----------|-------------|-------------|
| pid         | Varchar   | Primary key | Plan ID     |
| planName    | Varchar   |             | Plan Name   |
| description | Varchar   |             | Description |
| validity    | Varchar   |             | Validity    |
| amount      | Int       |             | Amount      |
| active      | Varchar   |             | Active      |

Table: timetable

Primary Key: tid

| Field | Data Type | Constraints | Description |
|-------|-----------|-------------|-------------|
| tid   | Int       | Primary key | Table ID    |
| tname | Varchar   |             | Table Name  |
| day1  | Varchar   |             | Day 1       |
| day2  | Varchar   |             | Day 2       |
| day3  | Varchar   |             | Day 3       |
| day4  | Varchar   |             | Day 4       |
| day5  | Varchar   |             | Day 5       |
| day6  | Varchar   |             | Day 6       |

## **SYSTEM TESTING AND IMPLEMENTATION**

---

## 4. SYSTEM TESTING AND IMPLEMENTATION

### 4.1. System Testing

#### 4.1.1. Unit Testing

- Unit testing involves testing individual components of the system, such as:
  - **Member Registration Module:** Checking if users can successfully register and their details are stored correctly.
  - **Payment Processing Module:** Ensuring that transactions are correctly processed.
  - **Workout Scheduling Module:** Verifying if trainers can create, edit, and assign workout plans.
- Performed by developers using automated tools like JUnit or manual test cases.

#### 4.1.2. Integration Testing

- Focuses on verifying interactions between different modules, such as:
  - **Member Module & Payment Module:** Ensuring that when a member makes a payment, their membership status updates correctly.
  - **Trainer Module & Schedule Module:** Checking if trainers can assign schedules to members and if they reflect in the user's profile.
  - **Equipment Tracking & Maintenance Module:** Ensuring that gym staff can log maintenance requests and receive notifications.
- Uses tools like Selenium for web-based applications.

#### 4.1.3. Validation Testing

- Ensures the system meets business requirements.
- Key validation areas include:
  - **User Authentication:** Validating login, role-based access, and security features.
  - **Reports & Analytics:** Checking if the system generates accurate reports on attendance, revenue, and member progress.

- **Mobile Compatibility:** Ensuring the system works well on mobile devices for trainers and members.

#### 4.1.4. Output Testing or User Acceptance Testing (UAT)

- Conducted with actual gym staff, trainers, and members.
- Ensures that:
  - Members can **register, book workouts, make payments, and receive reminders.**
  - Trainers can **schedule sessions, track progress, and update workout plans.**
  - Gym admins can **manage subscriptions, generate reports, and handle maintenance requests.**
- Any feedback from end-users is used to improve the system before deployment.

#### 4.2. System Implementation

- The gym management system is deployed in phases:
  - **Pilot Deployment:** Implementing the system in one gym branch before a full rollout.
  - **Parallel Deployment:** Running the new system alongside the existing manual system to compare results.
  - **Full Deployment:** Replacing the old system entirely once testing and training are successful.
- Data migration from old systems (spreadsheets/manual records) to the new system is completed.

#### 4.3. Training

- Training ensures that gym staff, trainers, and members can effectively use the system.
- Types of training:
  - **Admin Training:** Focuses on membership management, payment processing, and report generation.
  - **Trainer Training:** Covers schedule creation, member progress tracking, and workout planning.

- **Member Training:** Helps users navigate the app/portal, book sessions, and make payments.
- Training methods:
  - **On-site Training:** Hands-on training sessions at the gym.
  - **Online Tutorials:** Video guides and FAQs for members.
  - **Help Desk Support:** Dedicated support team for troubleshooting.

#### 4.4. System Maintenance

- **Corrective Maintenance:** Fixes bugs or errors encountered after deployment.
- **Preventive Maintenance:** Regular updates to enhance performance and security.
- **Adaptive Maintenance:** Modifications to accommodate new features (e.g., integration with wearable fitness devices).
- **User Support:** Providing continuous support through chatbots, FAQs, or customer service.

## 5.2. Screen Shots

Login page:

The image shows a gym management system login page for SCULPT - Mind Soul Muscle with a dark-themed design. It features a login form with fields for username, password, a login button, and a password recovery option. The SCULPT logo is displayed at the top, emphasizing the brand identity.

## Dashboard :

The image displays a gym dashboard with key statistics. It shows the total gym income, providing an overview of earnings. The total number of members is also displayed for tracking growth. Newly registered members are highlighted separately. Available membership plans are listed for easy selection. The dashboard helps in monitoring financial and membership details. This ensures efficient management of the gym's operations.

## Registration Page :

The screenshot shows a web application interface for a new registration. On the left is a dark sidebar with a menu containing: Dashboard, New Registration (active), Payments, Members, Health Status, Plan, Overview, Exercise Routine, Profile, and Logout. The main content area has a header with 'Welcome admin' and a 'Log Out' link. Below the header, the title 'New Registration' is displayed. The central form, titled 'NEW ENTRY', contains the following fields: MEMBERSHIP ID (pre-filled with 1743325692), NAME, STREET NAME, CITY, ZIPCODE, STATE, GENDER (dropdown menu), DATE OF BIRTH (calendar icon), PHONE NO, EMAIL ID, JOINING DATE (calendar icon), and PLAN (dropdown menu). At the bottom of the form are 'Register' and 'Reset' buttons.

The image displays a new registration page for a client. They are required to enter their full details for the signup process. The form collects essential information for membership. Once all details are filled in, the client can proceed. The system verifies the entered information for accuracy. After successful submission, the registration is completed. This ensures a smooth and efficient onboarding process.

## Payment Page :

| Sl.No | Membership Expiry | Name   | Member ID  | Phone      | E-Mail                      | Gender | Action                      |
|-------|-------------------|--------|------------|------------|-----------------------------|--------|-----------------------------|
| 1     | 2025-02-23        | Ram    | 1742723837 | 6378963789 | sabaremani03@gmail.com      | Male   | <a href="#">Add Payment</a> |
| 2     | 2025-03-20        | Pavish | 1742723690 | 8768769995 | pavishrajendran07@gmail.com | Male   | <a href="#">Add Payment</a> |
| 3     | 2025-03-29        | Mani   | 1743230675 | 9898965432 | Mani02@gmail.com            | Male   | <a href="#">Add Payment</a> |

The image displays a payment page for the client. They will make a payment based on the selected plan. A payment button is provided for proceeding with the transaction. When the client clicks the button, they are redirected to the payment page. The system processes the payment details securely. Upon successful completion, a confirmation message appears. This ensures a smooth and hassle-free payment experience.

## Make Payment Page:

Welcome admin Log Out

Gym

**MAKE PAYMENT**

MEMBERSHIP ID: 1742723690

NAME: Pavish

CURRENT PLAN: Monthly Plan

SELECT NEW PLAN: Monthly Plan

AMOUNT: 600

VALIDITY: 1 Month

ADD PAYMENT Reset

The image displays a "Make Payment" page for the client. They can choose a plan and proceed with the payment. An "Add Payment" button is available for confirmation. Once the button is clicked, the transaction is processed. The system verifies the payment details. Upon successful completion, a confirmation message appears. This ensures a smooth and secure payment process.

## Members :

### Member Details Page :

The image displays member details along with two tables. One table shows expired memberships for easy tracking. The other table lists current members with active packages. This helps in managing membership renewals efficiently. The expired table highlights members who need to renew their plans. The active package table ensures smooth monitoring of ongoing memberships. This setup allows for effective membership management and organization.

The image displays an "Edit Member" section. It includes three action buttons for managing member details. The "View Details" button allows checking member information. The "Edit" button enables modifications to the member's data. The "Delete" button removes a member from the system if needed. These options help in efficiently managing gym memberships. This setup ensures smooth updates and record maintenance.

## Health Satus Pages:

Health Status

| Sl.No | Member ID  | Name   | Contact    | E-Mail                      | Gender | Date Of Birth | Joining Date | Action                        |

The image displays the "Income Per Year" section. It shows the total revenue generated annually. This helps in analyzing the gym's financial growth. The data provides insights into yearly income trends. It allows for better financial planning and decision-making. Tracking yearly income helps in evaluating business performance. The setup ensures efficient monitoring of financial progress over time.

## Exercise Routine :

### Create Routine Page :

The image displays the "Create Routine" section of a fitness management application. On the left is a dark sidebar with a menu containing: Dashboard, New Registration, Payments, Members, Health Status, Plan, Overview, Exercise Routine (expanded), Add Routine, Edit Routine, View Routine, Profile, and Logout. The main content area has a header "Create Routine" and a "NEW ROUTINE" form. The form includes a "ROUTINE NAME:" label and input field, followed by "DAY 1:" through "DAY 6:" labels and input fields. At the bottom of the form are two buttons: "Add Routine" and "Reset". In the top right corner of the page, there is a user greeting "Welcome admin" and a "Log Out" link.

The image displays the "Create Routine" section. It allows for designing customized workout routines. Trainers can set exercises, durations, and schedules. This helps in creating structured fitness plans for clients. The routine ensures effective and goal-oriented training. It helps members stay consistent with their workouts. The setup supports better fitness management and progress tracking.

## Edit Routines Page :

The screenshot displays the 'Edit Routines' page within an admin dashboard. On the left is a dark sidebar with a menu containing the following items: Dashboard, New Registration, Payments, Members, Health Status, Plan, Overview, Exercise Routine (expanded), Add Routine, Edit Routine, View Routine, Profile, and Logout. The main content area has a header with 'Welcome admin' and a 'Log Out' link. Below the header, the title 'Routines' is followed by a table. The table has four columns: 'Sl.No', 'Routine Name', 'Routine Details', and 'Delete Routine'. It contains one row with the routine 'Beginnerâ€™s Gym Workout'. In the 'Routine Details' column, there is a blue 'Edit Routine' button. In the 'Delete Routine' column, there is an orange 'Delete' button.

| Sl.No | Routine Name             | Routine Details              | Delete Routine         |
|-------|--------------------------|------------------------------|------------------------|
| 1     | Beginnerâ€™s Gym Workout | <a href="#">Edit Routine</a> | <a href="#">Delete</a> |

The image displays the "Edit Routine for Client" section managed by the admin. It allows the admin to modify a client's workout plan. Changes can be made to exercises, durations, and schedules. This helps in customizing routines based on client needs. Adjustments ensure the plan aligns with fitness goals. It supports effective training and progress tracking. The setup allows for smooth and flexible workout management.

## View Routines Page :

The screenshot displays the 'View Routines' page. On the left is a dark sidebar with navigation links: Dashboard, New Registration, Payments, Members, Health Status, Plan, Overview, Exercise Routine (expanded), Add Routine, Edit Routine, View Routine, Profile, and Logout. The main content area has a header 'Routines' and a table with the following data:

| Sl.No | Routine Name           | Routine Details              |
|-------|------------------------|------------------------------|
| 1     | Beginner's Gym Workout | <a href="#">View Details</a> |

At the top right of the main area, it says 'Welcome admin' and 'Log Out'.

The image displays the "View Routine for Client" section managed by the admin. It shows the assigned workout plan for a client. The routine includes exercises, durations, and schedules. This helps the admin monitor the client's fitness progress. It ensures the workout plan is being followed properly. The admin can review details and make necessary adjustments. The setup allows for effective fitness tracking and management.

|            | <input type="button" value="SUBMIT"/> <input type="button" value="Reset"/> |

The image displays the admin's profile page. It contains personal details and account information. The profile may include the admin's name, email, and role. This section helps in managing admin credentials. It allows for updates and modifications if needed. The profile page ensures secure access to admin settings. The setup supports efficient account management and organization.

## **CONCLUSION AND FUTURE ENHANCEMENT**

---

## **6. CONCLUSION AND FUTURE ENHANCEMENT**

### **6.1 Conclusion**

In conclusion, this system effectively streamlines gym management by providing features such as member registration, payment tracking, health status monitoring, and routine management. The platform enhances efficiency by offering a user-friendly dashboard for tracking total income, active members, and available plans. With functionalities like editing and viewing member details, monitoring expired and active packages, and customizing workout routines, the system ensures seamless administration. By integrating these features, the gym can enhance customer experience, improve operational management, and maintain accurate records. Overall, this system simplifies gym operations and contributes to better fitness management.

### **6.2 Scope for Further Enhancement**

While the current system provides comprehensive gym management functionalities, there is scope for further improvement. Future enhancements may include integrating automated notifications for membership renewal reminders, advanced analytics for tracking member progress, and AI-based workout recommendations. Additionally, incorporating mobile app support can provide members with easier access to their plans and health status. Secure online payment gateways and multi-user role management can further enhance usability and security. By implementing these improvements, the system can offer a more advanced and efficient gym management experience.
